

HO Structure Kit  
**CORRUGATED FENCE**  
 933-3632

Thanks for purchasing this Cornerstone Series® kit. All parts are styrene plastic so use appropriate paint and glue to complete your model. Please read the directions and study the drawings before starting assembly. The old sayings “everything old is new again” and “one man’s trash is another’s treasure” certainly applies to the salvage business. Today, the range of man-made materials being recycled into new products includes all kinds of metals, rubber, plastics, paper and more. Modern salvage operations not only collect these materials from local customers, they sort, shred, shape and ship them as raw materials to processing industries.

Fences do double-duty at modern salvage yards, preventing trespassing and theft, while increasing safety. Many are also painted (blues and greens are common) to protect the steel and provide a view block.

Designed for easy customizing, you can make a larger fence by combining kits, each sold separately. Simply cut off end posts as shown, to create a clean corner, then join Fence Post Frames, (2) as needed. Glue Fence Sections (1) on the outside of the Frames with the corrugated panels facing outward. Gates (3 and 4) can be added where needed between Frames and glued open or closed.
